

Less is More:

Embrace the strength of a
markless SGRT centric workflow

Ryan Hecox, MS, DABR
Lead Medical Physicist
Intermountain Health

How Can We Improve All 3?

Embrace the strength of a markless SGRT centric workflow:

Indexing of Immobilization

Predict Absolute Couch Values From Sim

Eliminate Unnecessary Steps & Focus On Your Patients

Indexing of Immobilization

RELIABILITY

PROGRAM SCHEDULE

SGRT 2019 LAS VEGAS THURSDAY MAY 16

07.30 - 08.30am **REGISTRATION & BREAKFAST**

LOCATION: **SILK ROAD 1**

08.30 - 10.30am

LOCATION: **VINOLY**

8:30 - 8:45am

Welcome and Introduction

Katie McCurdy BSRT(T)
SGRT Program Director

Megan Sank RTT
Master of Ceremonies

8:45 - 9:30am

Elevating Safety and the Patient Experience

Kenneth Wong MD
USC Department of
Radiation Oncology and
Children's Hospital
Los Angeles

9:30 - 10:00am

Experience from a Patient's Perspective

Maureen Roadman
Patient treated at UCSD

10:00 - 10:30am

The Role of Surface Guided Radiotherapy in Intra-cranial Radiosurgery and Mediastinal Lymphoma

Parag Sanghvi MD MSPH
UCSD

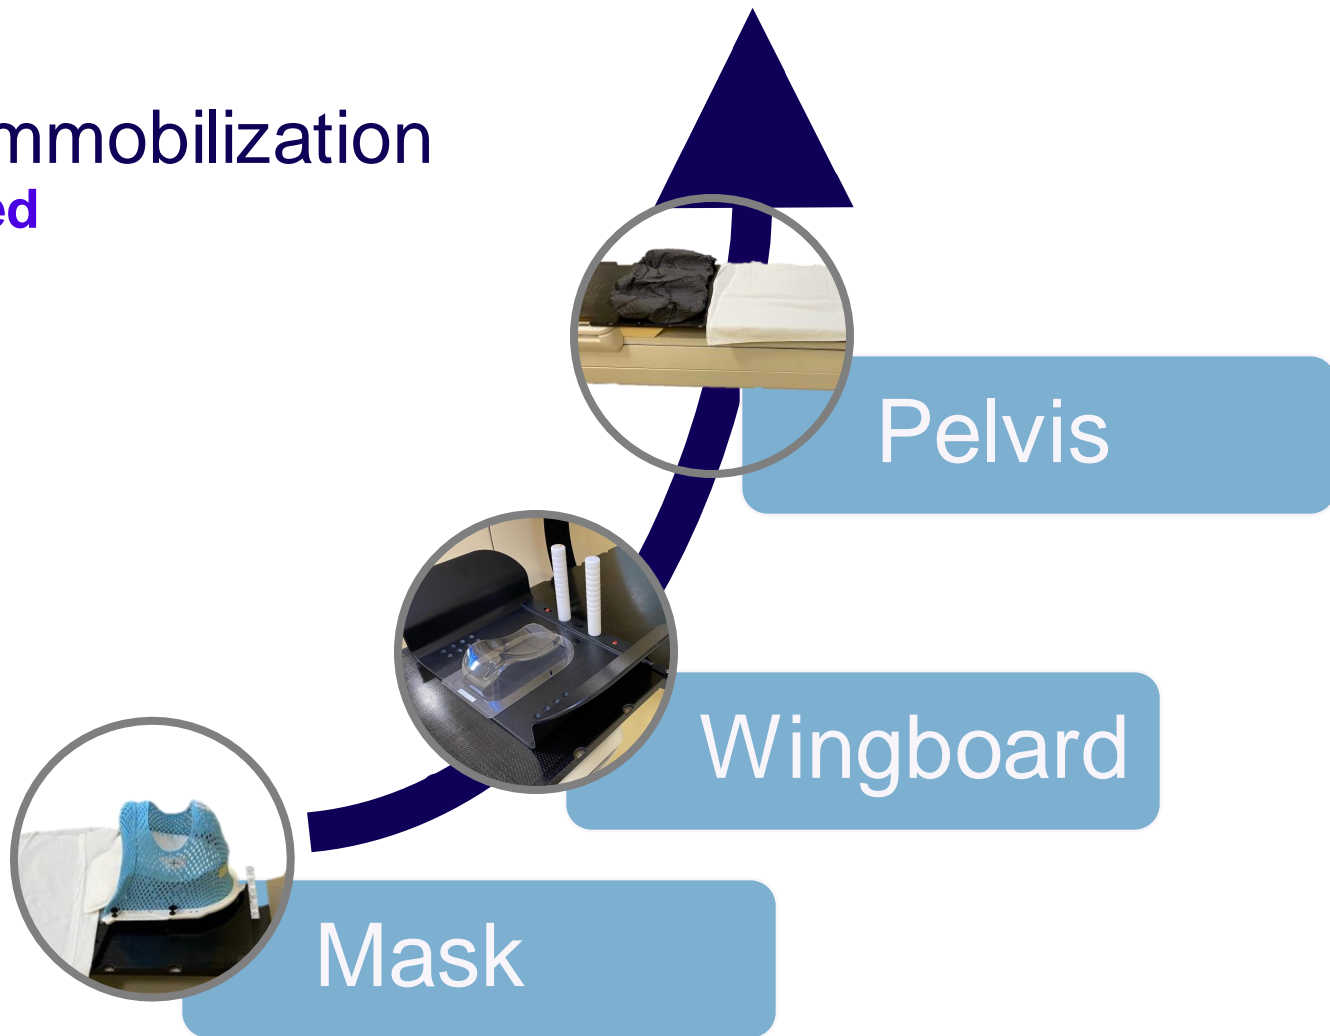

Indexing of Immobilization

Secret (not secret) to improving efficiency

- After first day when couch values are acquired:
 - The couch position is known before the patient lays down
 - Use Auto-Go functions of the linac to move your patient into treatment position even while they are settling into position.
 - The patient will then be “close enough” for SGRT to refine the position
 - Use position deltas & video overlay to finalize
- **Beneficial even if still using marks! Start Today!**

Indexing of Immobilization

Easy to Advanced

Indexing of Immobilization

KEEP IT SIMPLE!!!

Pelvis & Abdomen

Indexing of Immobilization

Indexing of Immobilization

Indexing of Immobilization

Indexing of Immobilization

Indexing of Immobilization

Indexing of Immobilization

Indexing of Immobilization

Indexing of Immobilization

The couch **IS PART**
of the immobilization
system!

Indexing of Immobilization

Indexing of Immobilization

I can put reference marks anywhere I want!

Indexing of Immobilization

Let's put them under the couch to protect them.

Indexing of Immobilization

But I can't see them anymore!?!

I would need X-Ray vision for them to be useful now. ☹

Indexing of Immobilization

CT image of couch **bottom** with permanent x-ray visible markers that produce minimal artifacts

Indexing of Immobilization

RELIABILITY ACHIEVED!

- **ANY** immobilization on top of this couch has permanent reference marks included in the scan with ZERO effort
- **Maximum** freedom at simulation
- **Universal** solution

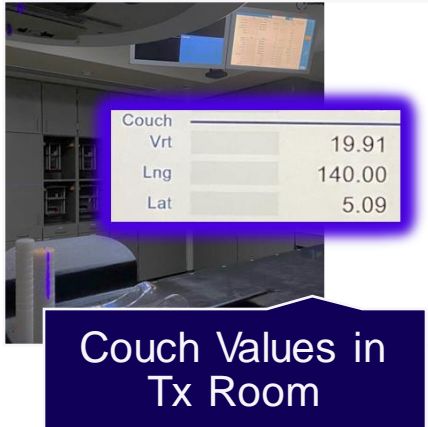

Predicting Couch Position

SIMPLICITY

Start With The End In Mind

We need to know where to position the patient/couch in the treatment room

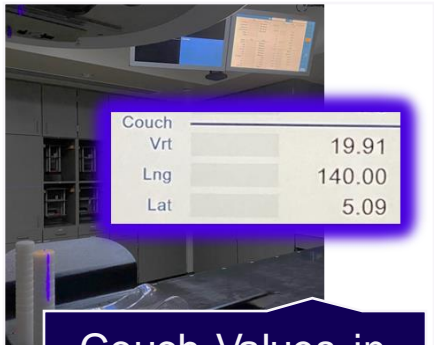

Couch		
Vrt		19.91
Lng		140.00
Lat		5.09

Couch Values in Tx Room

Start With The End In Mind

We need to know where to position the patient/couch in the treatment room

Couch Values in
Tx Room

Couch

Couch Vrt cm

Couch Lng cm

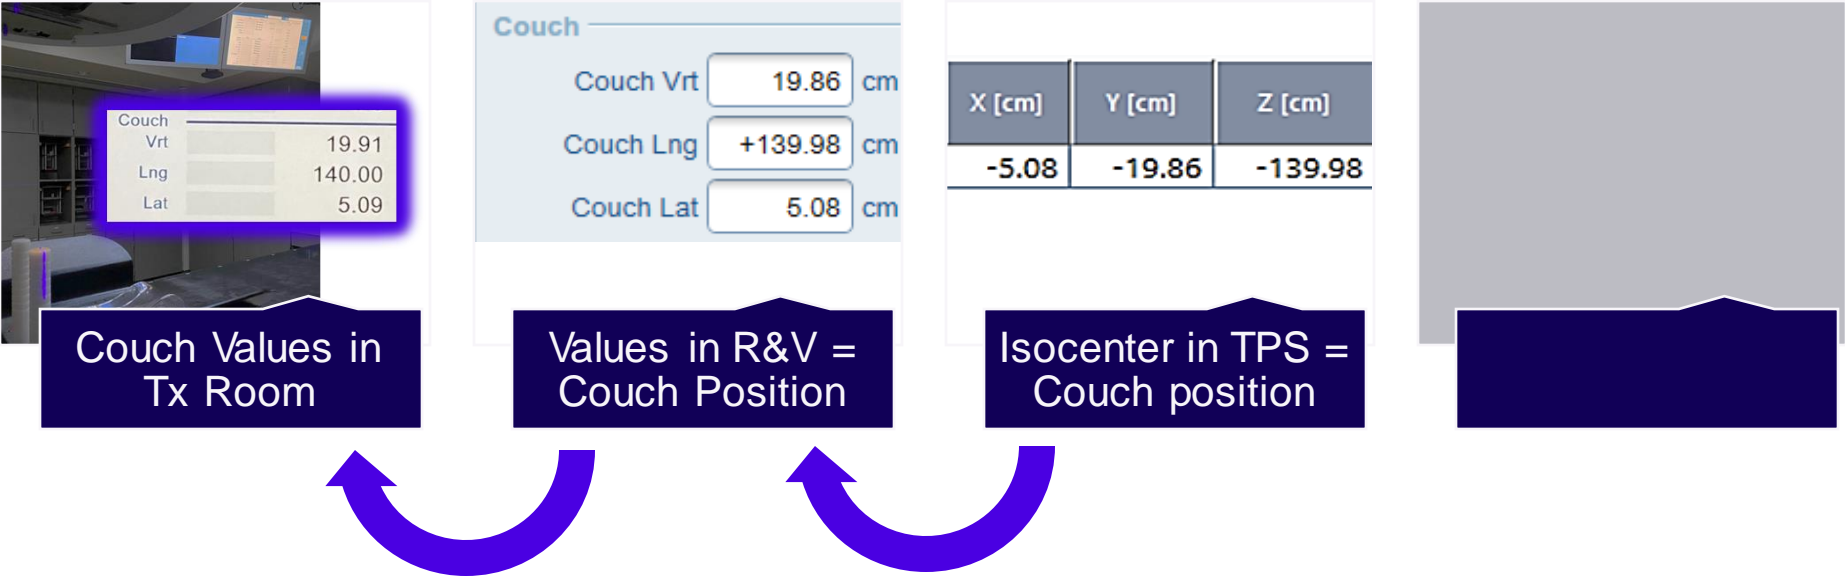

Couch Lat cm

Values in R&V =
Couch Position

Start With The End In Mind

We need to know where to position the patient/couch in the treatment room

Start With The End In Mind

We need to know where to position the patient/couch in the treatment room

Couch Values in Tx Room

Values in R&V = Couch Position

X [cm]	Y [cm]	Z [cm]
-5.08	-19.86	-139.98

Isocenter in TPS = Couch position

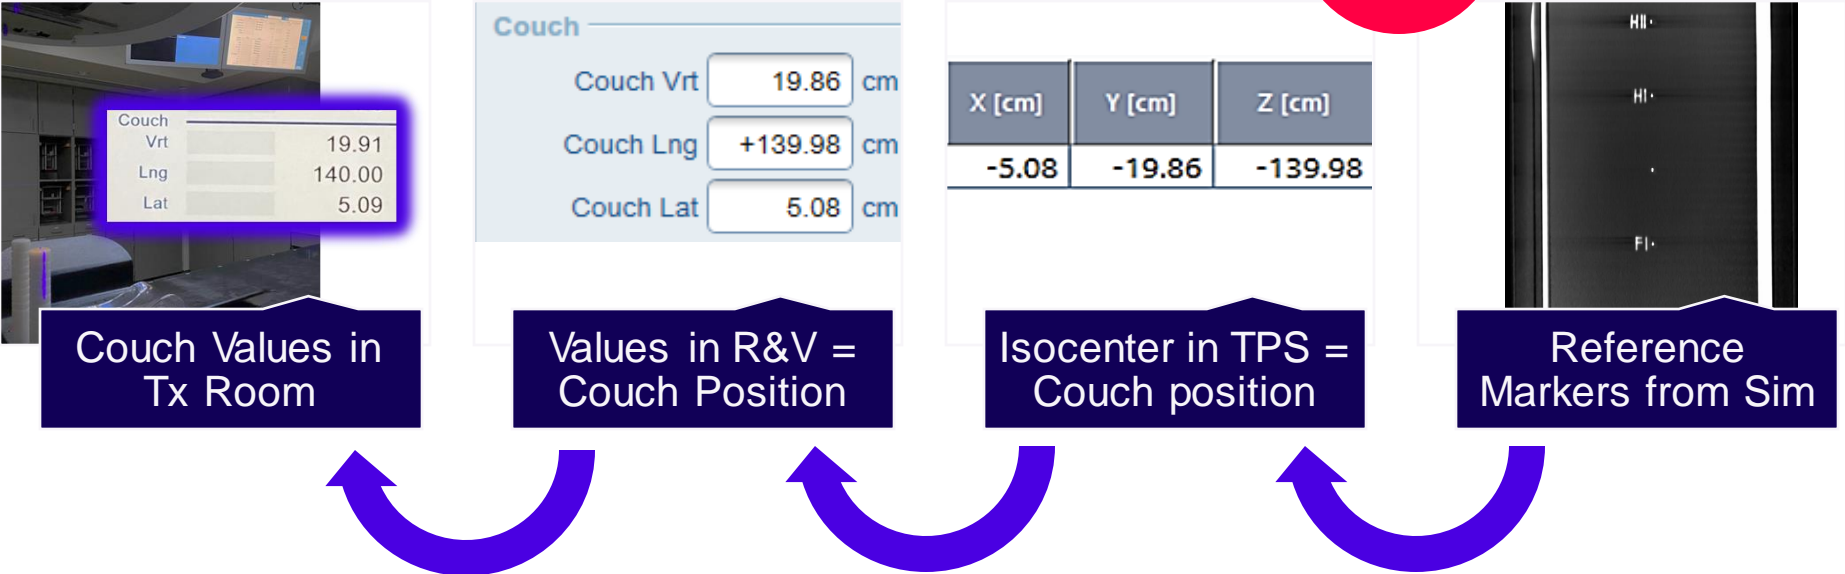

Reference Markers from Sim

Start With The End In Mind

We need to know where to position the patient/couch in the treatment room

Its ok to not follow the next 5 slides. If its not for you its ok. These slides are for **SOMEONE** in your clinic to help implement this workflow. 😊

Its ok to not follow the next 5 slides!

If you are not the person responsible for
setting this up, just relax for 2 minutes.

These slides are for SOMEONE in your
clinic to help implement this workflow. 😊

Just write down my email and I can
send you this presentation.

Ryan.Hecox@imail.org

Sim to Treatment Room Conversion Setup

1) Reference object setup at linac isocenter.
Index position at ~mid-LNG.

Plan		Field				
	Plan	Actual		Plan	Actual	Go To/Resume
Int Mount		No Accy	Gantry Rtn		0.0	
Acc Mount		No Accy				
e-Aperture		No Accy	Coll Rtn		0.0

01:00 PM
21-Apr-2023

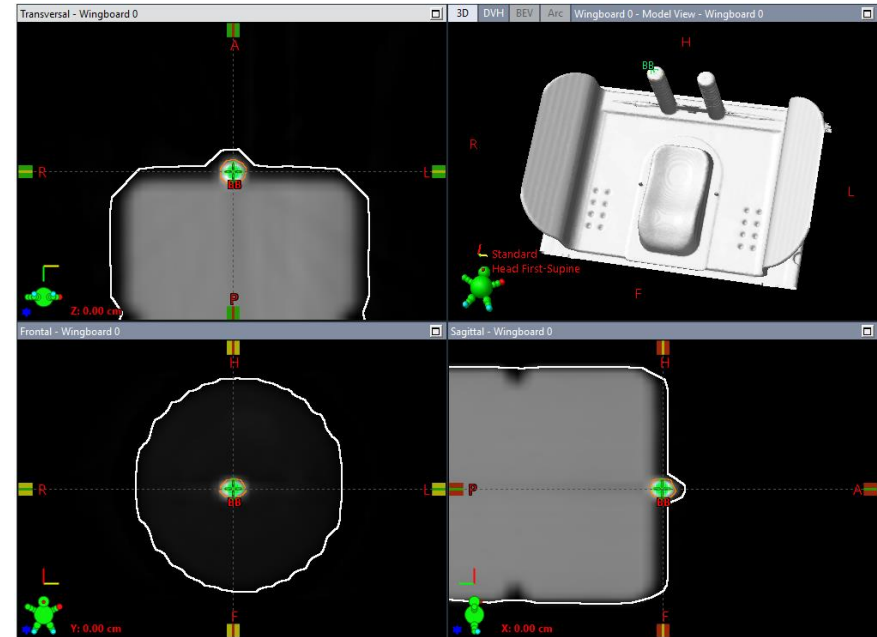

Display scale: Varian IEC (Units shown are centimeters or degrees)

2) Record in-room couch values

Sim to Treatment Room Conversion Setup

3) Reference object setup at on CT Sim.
Position at same LNG index.

4) Import CT and set user origin (0,0,0) at
reference object, add marker at this point

Sim to Treatment Room Conversion Setup

Couch		
Vrt		19.91
Lng		140.00
Lat		5.09
Rtn		0.2
Pitch		0.0

X -0.01 cm

Y 2.15 cm

Z -154.01 cm

$X = 0$

$Y = -2.2$

$Z =$

H4	84
H3	98
H2	112
H1	126
0	140
F1	154
F2	168

9) Extract values of under-table bbs
Note only LNG changes for each mark

10) Create table that is the INVERSE of these values.

Come Back Now!

Its time for the payoff

Sim Process

SIMPLICITY ACHIEVED!

1. Focus on immobilize and scan
 - **Scan is done = Patient is done**
 - **15 minutes in-room at sim**
2. Import CT into TPS
3. Pick **ANY** under table marker and set it as user origin

4. Create Linac Origin marker located at previously determined values:

$$X = 0$$

$$Y = -2.2$$

$$Z =$$

H4	84
H3	98
H2	112
H1	126
0	140
F1	154
F2	168

5. Set Linac Origin marker to be the user origin. All beam isocenter coordinates are now couch positions

Eliminate Unnecessary Steps & Focus On Your Patient

SIMPLICITY

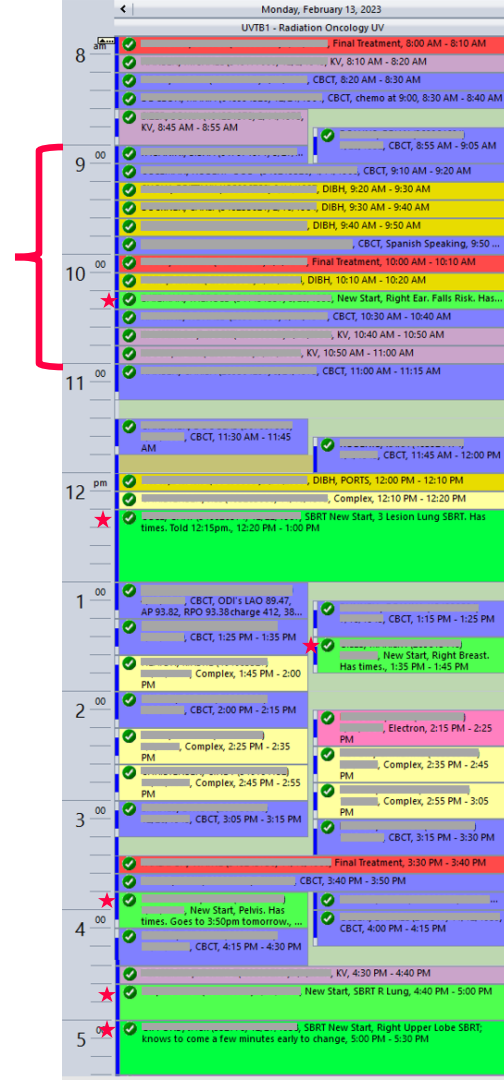

- **No** setting isocenter at Sim
- **No** aligning bbs stickers with lasers
- **No** training on CT Sim software or laser software needed
- **No** sending in laser coordinates
- **No** motion concern between scan and making marks/tattoos
- **No** marking or tattooing
 - **Zero chance for needles stick injury!!!!**
- **No** time spent doing “computer work” with your patient in an uncomfortable position
- **No** laser QA for sim to perform each day
- **No** laser QA for physics to perform monthly
- **No** expense of laser system for future CT sim purchase

Reap the Rewards at Treatment Too!

- 47 pts 8-5:30/ 9.5 hours
 - CBCT/SBRT/DIBH/....
 - 6 new starts
 - 3 Lesion SBRT new start in 40 min
 - 12 pt in 120 minutes including 4 DIBH and 1 new start
- New starts go as quickly & easily as a well-established pt
 - Everything is already known
- Every case, every day follows the same routine.
 - Setup immobilization->position patient on couch->auto-go->SGRT->IGRT->treat
- **Therapists spend all their focus on pt setup & image alignment.**
 - Every action is meaningful and getting the patient closer to the optimal position
 - This level of efficiency comes from putting our patient's treatment quality above all else, **not** cutting corners
 - Be willing to learn and let go of past methods
- Provides acceptable backup setup in cases where SGRT is not available.

Safety

Simplicity

Reliability

- Focus on patient
- No marks
- No reliance on lasers

Safety

Simplicity

Reliability

- Focus on patient
- No marks
- No reliance on lasers

- Universal process
- No user variability
- No calculations

- **Consistent** start & treat process
- **Obvious** if anything is incorrect
- **Redundancy** with couch values & SGRT surface

- Focus on patient
- No marks
- No reliance on lasers

- Universal process
- No user variability
- No calculations
