Guiding Radiation Therapy™

TAKING MOTION INTO ACCOUNT

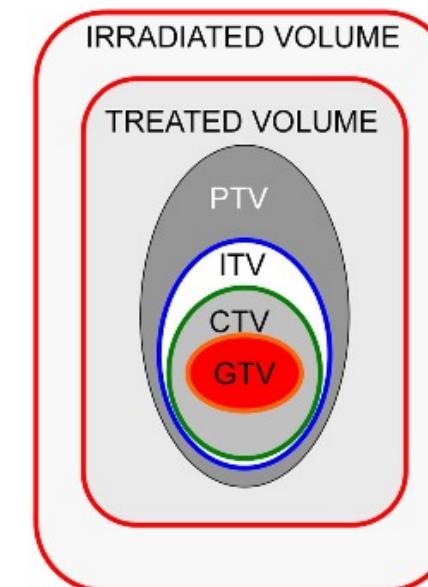

INTEGRAL DOSE AND THE IMPACT OF MARGINS

Figure 2: Orange and its peel representing a target volume and its margin. A 6.5 mm thick margin (peel) consists of the same volume as a 5 cm diameter target (orange), taken from Verellen et al. 2007.

ICRU 50/62/83

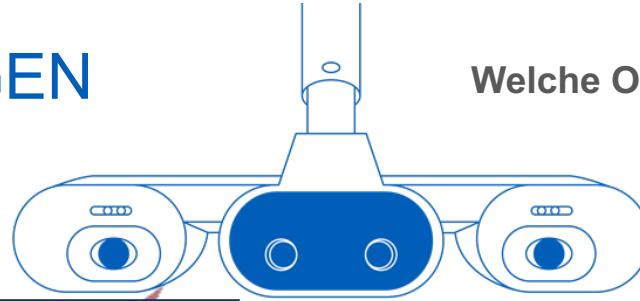

- **Gross tumor volume (GTV):** Tumor visible on (CT, MRI, PET, clinical etc.)

DIBH

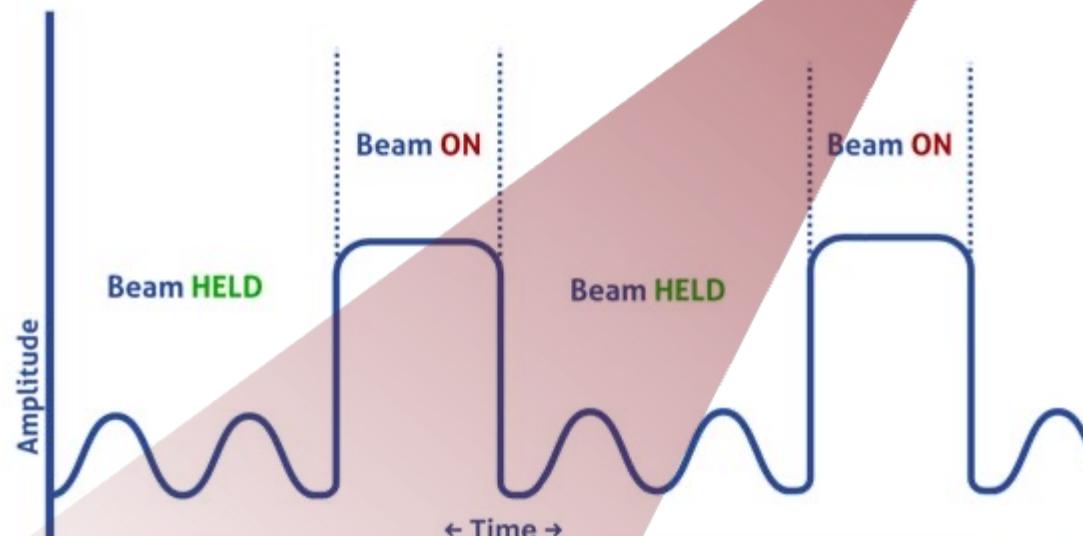

2

EEBH

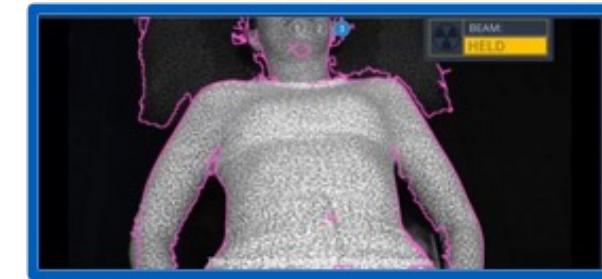

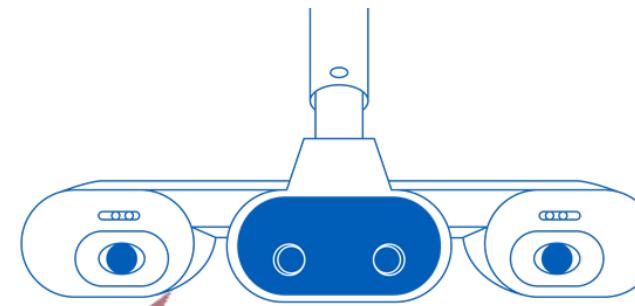

DIBH

Deep Inspiration Breath Hold (DIBH) a well-recognized technique used in radiotherapy treatments for the breast, thorax and abdomen. The patient takes a deep breath in and holds whilst the radiation is delivered.

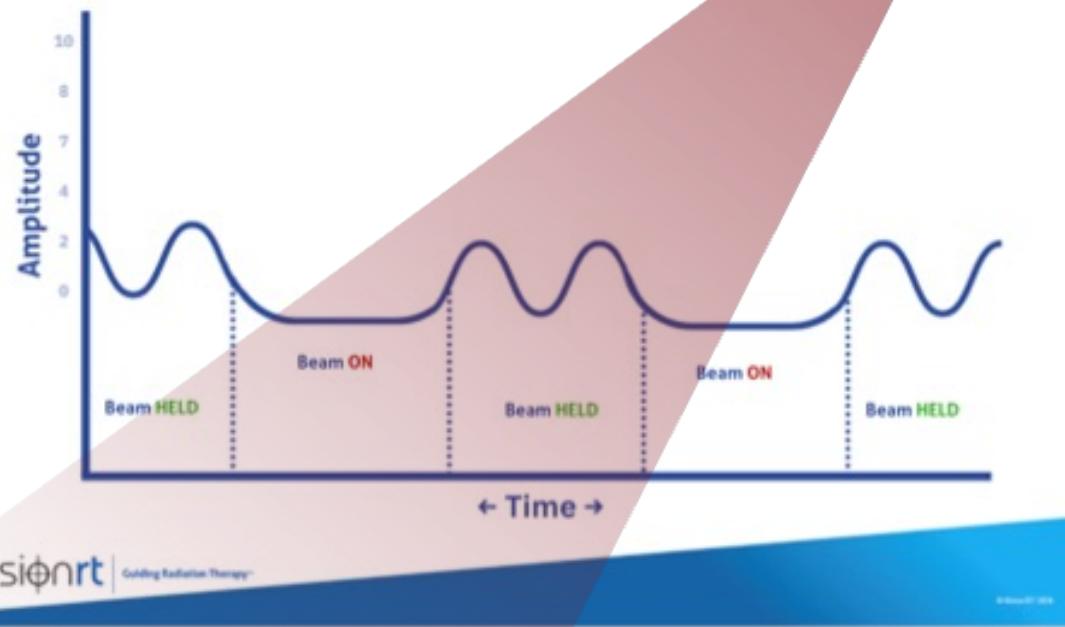

- Atemanhalt in tiefer Einatmung
- Effektive und unkomplizierte Methode die Bewegung zu reduzieren
- Für viele Brustbestrahlungen bereits state-of-the-art.
- Nicht von allen Patienten gut toleriert.

LNG cm	0.07
LAT cm	0.04
MAG cm	0.09
YAW °	-0.2
ROLL °	0.0
PITCH °	-0.3

EEBH

End Expiration Breath Hold (EEBH) a technique sometimes used in SBRT treatments to the abdomen. The patient will hold their breath at the end point of their expiration cycle whilst the radiation is delivered.

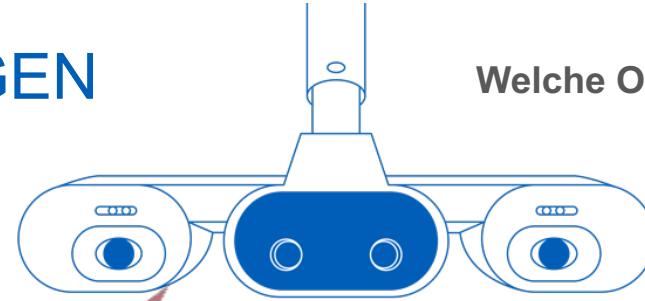

- Viele Kliniker glauben, dass EEBH besser toleriert wird als DIBH.
- End-expiration repräsentiert die längste statische Phase im Atemzyklus und kann für Atemanhaltetechniken geeigneter sein.

3 Phase

4 Amplitude

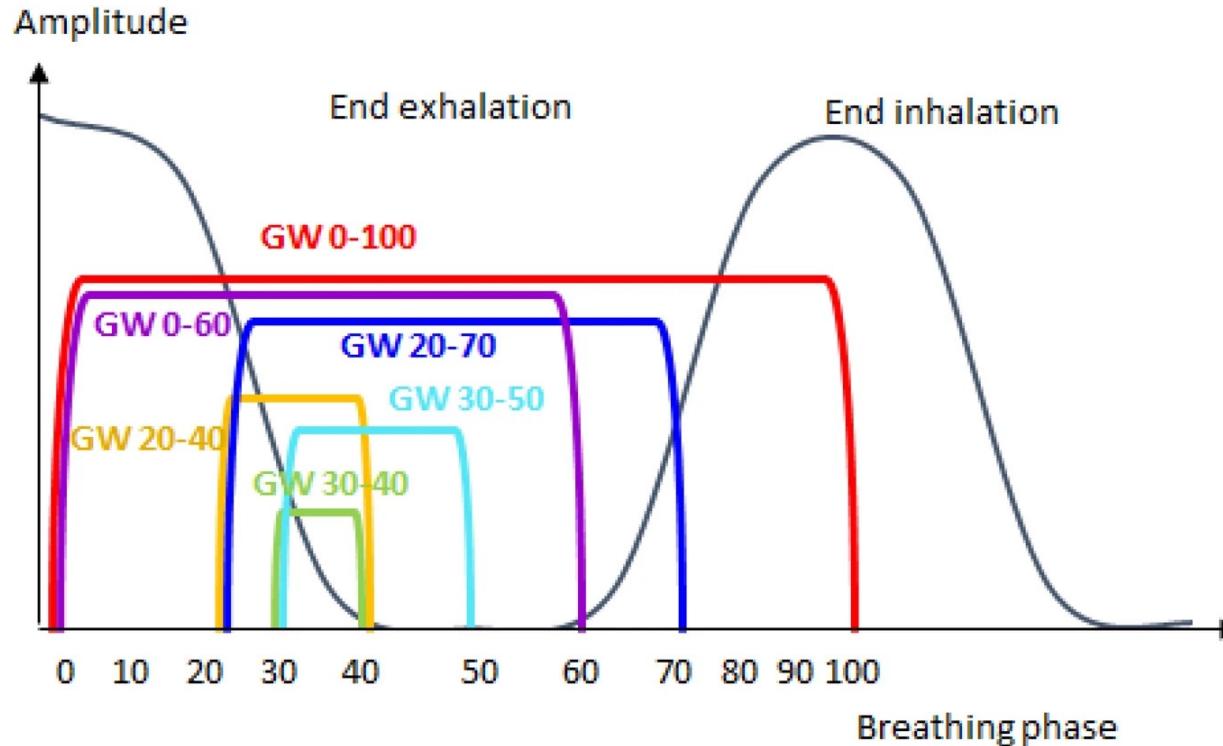

Schematic drawing of the respiratory cycle graph. The x-axis represents time from 0 (end of exhalation) to 50 (end of inhalation). The y-axis represents Amplitude. The graph shows a sinusoidal breathing pattern. Seven different gating windows (GW) are defined by colored rectangles, each spanning a specific phase of the breath cycle.

Conclusion

Patient-individual phase gating, considering patient individual tumor position and location, can considerably improve the dose distribution for SBRT of lung tumors. This can be of particular importance for the treatment of central tumors in close proximity to critical organs with high radiation doses.

Case number and case location peripheral	GW (phase)	PTV (cm ³)	PTV reduction		Max GTV motion (mm)	PTV	V _{20Gy} [lung] (%)	V _{20Gy} [lung] red. (%)	D _{mean} [lung] (Gy)
			(%)	(cm ³)

In **PHASE-based** gating, the beam is on during a prescribed phase of the breathing cycle. The timing of the cycle is the trigger.

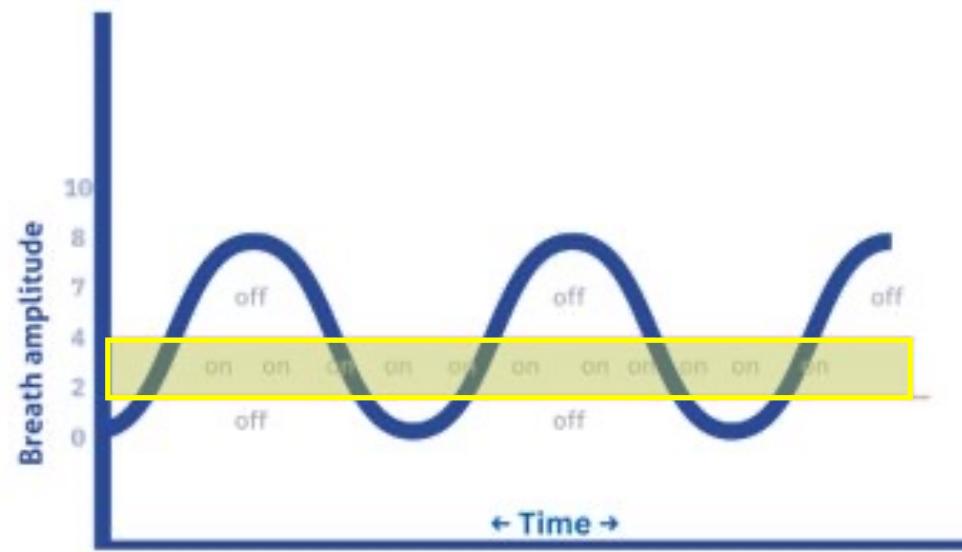

- Behandlungsstrahl nur während der gewählten Phase
 - Niedriger Duty Cycle

VRT _{cm}	0.04
LNG _{cm}	0.07
LAT _{cm}	0.04
MAG _{cm}	0.09
YAW°	-0.2
ROLL°	0.0
PITCH°	-0.3

In AMPLITUDE-based gating, the beam is on during a specific amplitude, regardless of where the patient is in the breathing cycle.

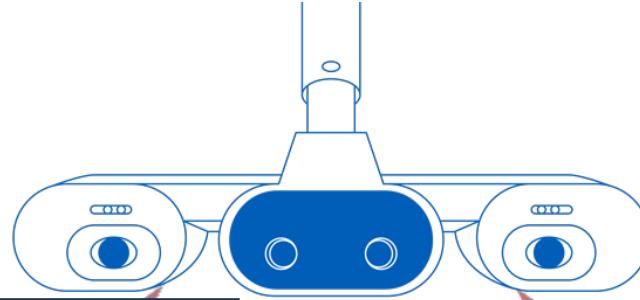

- Behandlungsstrahl nur während einer bestimmten Amplitude
- Üblicherweise höherer Duty Cycle als phasenbasiert
- Niedrigere Konformität
