

THE IMPORTANCE of SGRT in CURRENT CLINICAL PRACTICE: RADIATION ONCOLOGIST PERSPECTIVE

Hale Basak CAGLAR
Anadolu Medical Center
Department of Radiation Oncology
Turkey

OVERVIEW

- Introduction
 - The team
 - The hospital
 - Treatment Platforms
- SGRT
- Evidence
- Indications
- Workflow – case examples

INTRODUCTION

- The team
 - 4 radiation oncologists
 - 4 physicist
 - 3 dosimetrist
 - 10 technologist
 - 3 nurse
- All radiation therapies except brachytherapy
 - Well known for radiosurgery (50%)

INTRODUCTION

- The hospital
 - Stand alone private hospital
 - Established in 2005
 - Affiliated to Johns Hopkins International
 - Mainly oncology
 - Strong international department
 - Member of ESMO
 - Member of EORTC
 - Member of OECI
- The team met with the hospital in 5/2017

TREATMENT PLATFORMS

- Varian Edge
 - SGRT – Vision RT
 - Hyperarc
 - iCBCT
 - HD MLC
- CyberKnife S7
 - MLC
 - Precision
 - IDMS
 - Volo

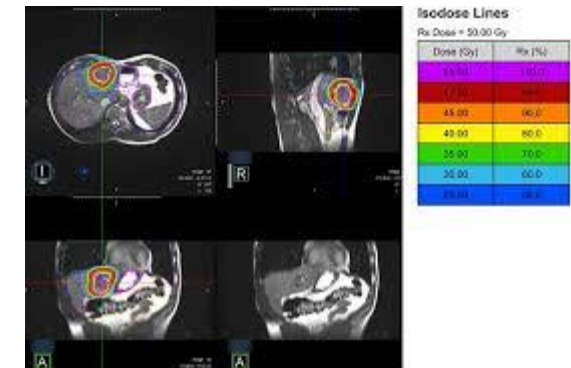

- Radixact
 - Precision
 - C-True
 - Precise ART – RTX
- IORT – Xoft
- Elekta Unity MR Linac

ADVANCES IN RADIATION TREATMENTS

- Higher doses
- Smaller targets
- Narrow margins
- Predefined anatomies
- Motion
 - Predictable
 - Unpredictable
- Image guidance becomes key!!!

INTEGRATION of RADIOGRAPHIC IMAGE GUIDANCE with NON-RADIOGRAPHIC LOCALIZATION

- Marker-based
 - Passively track a reflective marker with an imaging system operating in the infrared spectrum
 - Actively track a radiofrequency (RF) beacon using a set of RF receivers
- Surface-based
 - Advances in computing power and imaging technology allow the mapping of many arbitrary points on the patient while simultaneously tracking their position over time
 - These points comprise a 3D surface and can be considered an extension of a marker-based approach, with a corresponding improvement in the ability to relate a patient's current position and posture to a reference

SURFACE GUIDED RADIATION THERAPY (SGRT)

- Video-based 3D surface imaging system
- Used to detect and reconstruct the skin surface of a patient in 3D before and during the radiotherapy treatment
- Non-invasive
- Real-time
- Non-ionizing

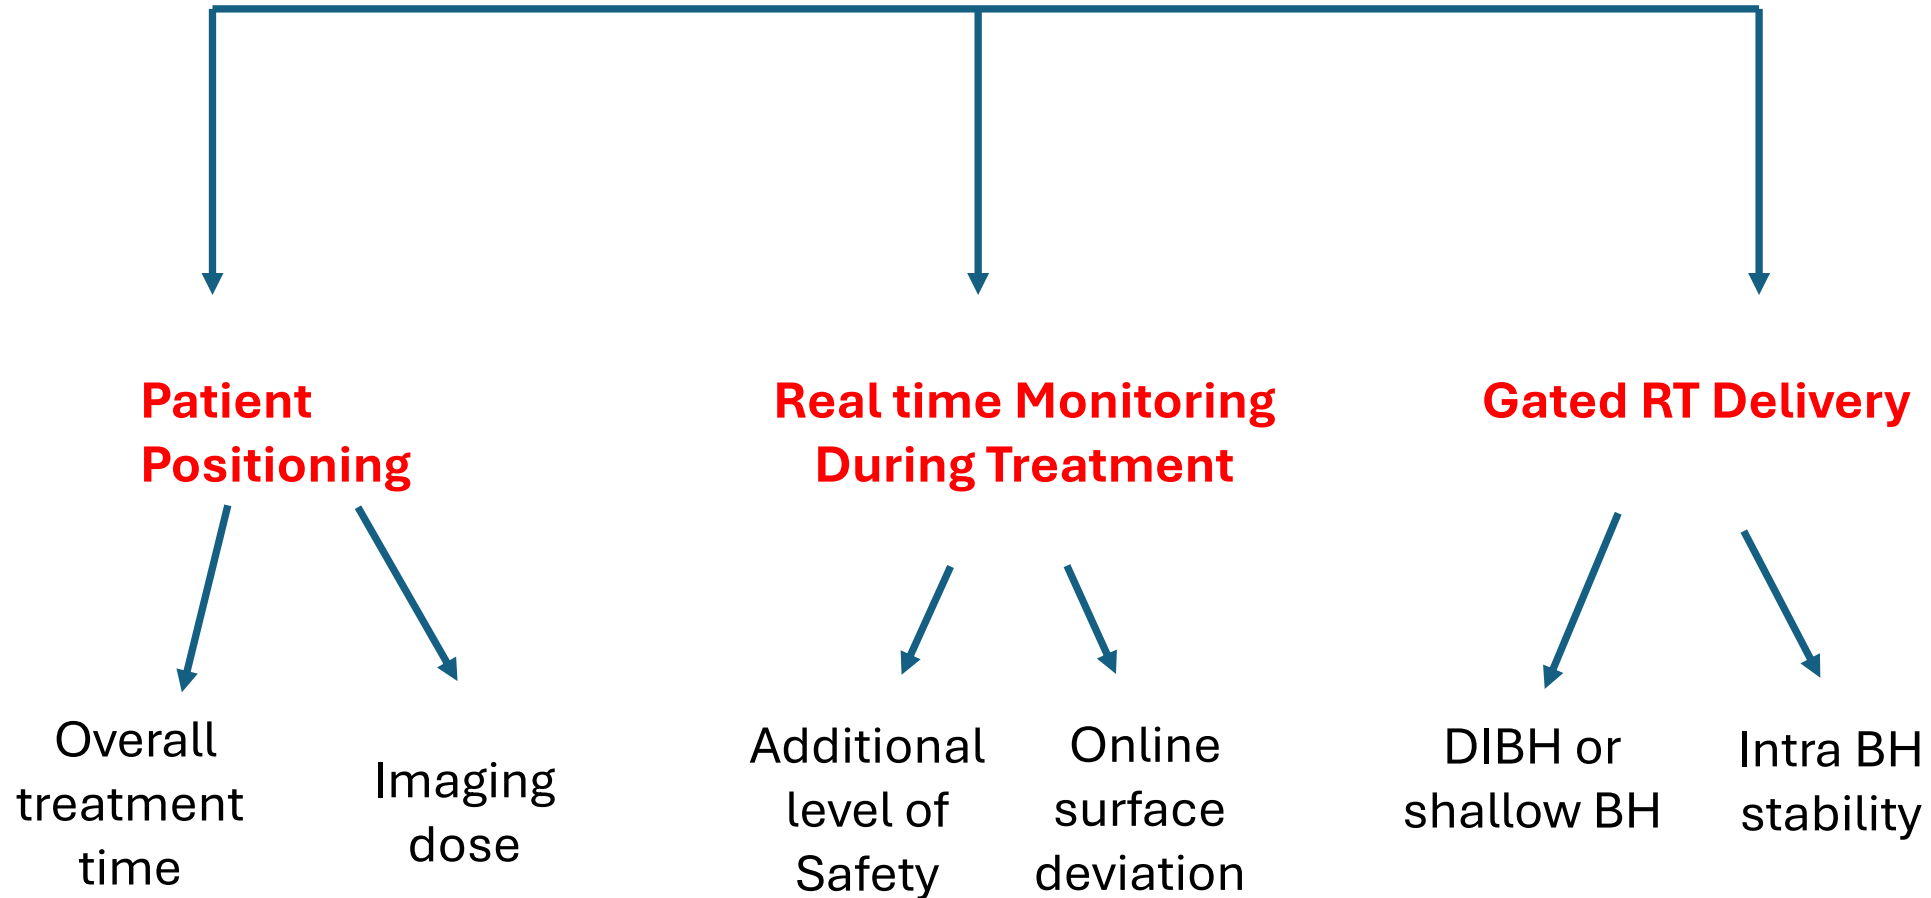

WHAT ARE THE ADVANTAGES?

- Enables reduction of initial set-up variability
- Decreases set-up time
- Provides verification of immobilization continuously during treatment
 - Non-coplanar linac gantry angles
- Provides dynamic surface information for use in gated and breath-hold treatment techniques

WHAT ARE THE ADVANTAGES?

- Permit reductions in the margins required to account for target localization uncertainty
- The ability to use immobilization techniques that confer greater comfort to patients
- Reduction in imaging dose through reduced radiographic localization requirements
- Improvements to the speed, efficiency, and safety of clinical workflows

WHY DO WE PREFER TO USE SGRT?

WHY DO WE PREFER TO USE SGRT?

- **Patient positioning:**
- **In-room online information** of the complete surface and position of the patient
- **For superficial tumors** (where surface deviations can act as a surrogate for tumor motion)
 - More accurate positioning compared to 3-point-lasers
 - Reduce the number of daily imaging in some cases
- **For deeper located tumors** (with no direct correlation between surface deviations and tumor movement)
 - Daily imaging remains mandatory
 - SGRT can reduce the time required for image registration
 - Prevent the need for multiple imaging

WHAT IS THE CURRENT EVIDENCE ?

Radiation Oncology

Research

Open Access

Reproducibility of patient setup by surface image registration system in conformal radiotherapy of prostate cancer

Marco Krenkli*^{1,2}, Simone Gaiano¹, Eleonora Mones³, Andrea Ballarè¹, Debora Beldi¹, Cesare Bolchini¹ and Gianfranco Loi³

REVIEW PAPER

IGRT and motion management during lung SBRT delivery

Vincent Caillet^{a,b,*}, Jeremy T. Booth^{a,b}, Paul Keall^c

^aNorthern Sydney Cancer Centre, Royal North Shore Hospital, Sydney, Australia

^bSchool of Physics, University of Sydney, Sydney, Australia

^cSchool of Medicine, University of Sydney, Sydney, Australia

Accuracy evaluation of the optical surface monitoring system on EDGE linear accelerator in a phantom study

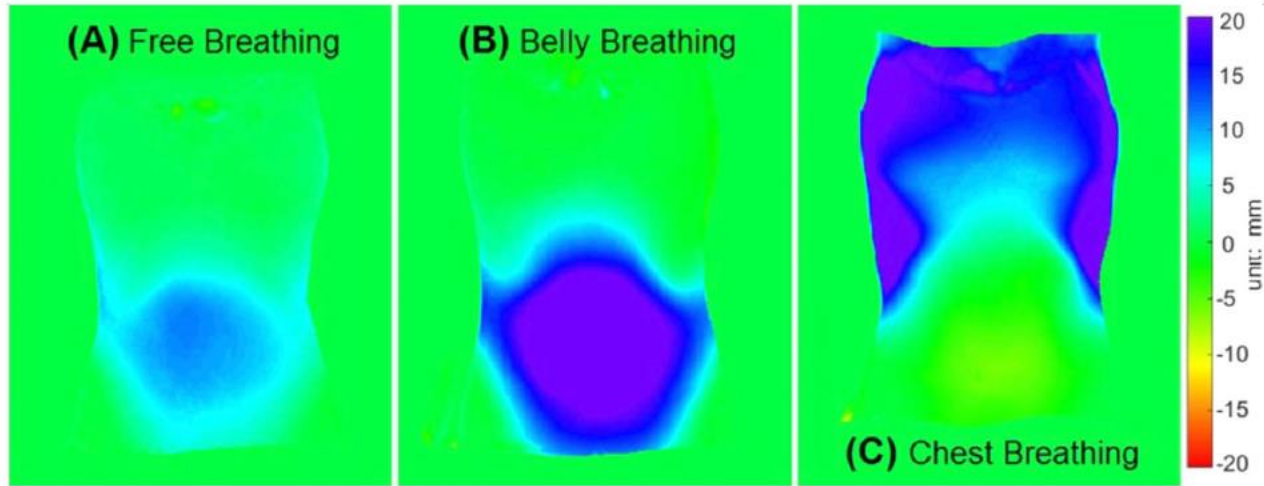

Pietro Mancosu, M.Sc., Antonella Fogliata, M.Sc., Antonella Stravato, M.Sc., Stefano Tomatis, M.Sc., Luca Cozzi, Ph.D., and Marta Scorsetti, M.D.

Radiotherapy and Radiosurgery Department, Humanitas Clinical and Research Center, Milan-Rozzano, Italy

WHAT DO THE EVIDENCE SAY?

- Review of in room IGRT methods before and during lung SBRT
- The SGRT systems is advantageous in detecting unexpected patient motion (cough etc)
- Breath hold treatments can be done more efficiently

CORRELATION OF RESPIRATION WITH SURFACE INFORMATION

Characterization of optical-surface-imaging-based spirometry for respiratory surrogating in radiotherapy

Vision RT PC

**At treatment
console**

Workstation

Camera pods
(3)

Calibration plate

**In treatment
room**

TREATMENT ROOM

- 3 ceiling mounted camera pods
- Each pod contains two camera sensors and a projector enabling real time 3D surface reconstruction
- The live surface is registered to a reference surface generating 6D shift information (real time deltas)

TREATMENT ROOM

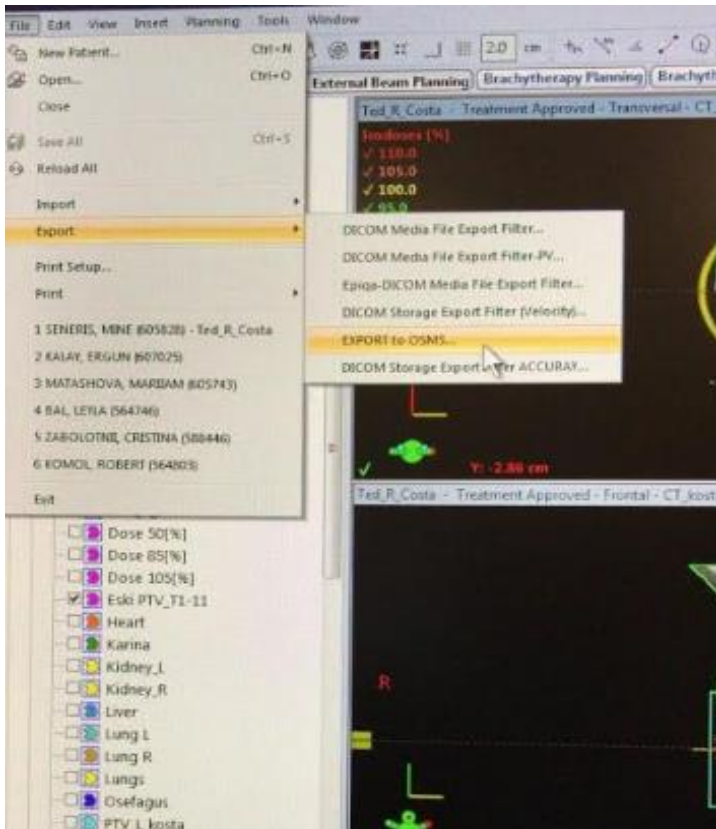

- 3 pods project a speckled red-light pattern onto patient's surface
- Stereo camera pods image pattern in 3D and software reconstructs full surface
- Surface matched in real time to reference image (from CT or AlignRT)

WORKFLOW – ROI

- Although the entire reference surface is displayed, only the selected ROI is used for fusion.
- In some cases, 2 different ROIs can be used for the same patient

FEASIBILITY in LIVER SBRT

Feasibility and tolerability of breath-hold in liver stereotactic body radiotherapy with surface guided radiotherapy

Menekşe Turna^a, Esra Küçükorkoç, Rashad Rzazade, Mehmet Doğu Canoğlu, Nadir Küçük, Hale Basak Çağlar

^aAnadolu Medical Center, Department of Radiation Oncology, Gebze, Kocaeli, Turkey

- Liver metastases from different primaries
- PROMs
- Two-step questionnaire

First questionnaire (Before planning CT)
1. Did you find the training you received before the breath-hold procedure helpful?
2. Was the equipment used during breath-hold clear and understandable?
3. Were the commands given by the technician understandable during breath-hold?
4. Was it challenging to hold your breath?
5. Was the CT scan time long?
6. Did you experience stress during the CT scan?
7. Were you worried because you took an active role in the CT scan?
Second questionnaire (After completion of Treatment)
1. Did you find the training you received before the breath-hold procedure helpful?
2. Was the equipment used during breath-hold clear and understandable?
3. Were the commands given by the technician understandable during breath-hold?
4. Was it challenging to hold your breath?
5. Was the treatment period long?
6. Did you experience stress during the treatment?
7. Were you worried because you took an active role in the treatment?

STUDY WORKFLOW

FEASIBILITY in LIVER SBRT

Feasibility and tolerability of breath-hold in liver stereotactic body
 radiotherapy with surface-guided breath-hold

çelik,

First questionnaire (Before planning CT)		1-4 scale
• 1. Did you find the training you received before the breath-hold procedure helpful?		4
• 2. Was the equipment used during breath-hold clear and understandable?		3,9
• 3. Were the commands given by the technician understandable during breath-hold?		3,8
• 4. Was it challenging to hold your breath?		1,5
• 5. Was the CT scan time long?		1,1
• 6. Did you experience stress during the CT scan?		1,2
• 7. Were you worried because you took an active role in the CT scan?		1,2
Second questionnaire (After completion of Treatment)		1-4 scale
• 1. Did you find the training you received before the breath-hold procedure helpful?		4
• 2. Was the equipment used during breath-hold clear and understandable?		3,9
• 3. Were the commands given by the technician understandable during breath-hold?		3,9
• 4. Was it challenging to hold your breath?		1,6
• 5. Was the treatment period long?		1,4
• 6. Did you experience stress during the treatment?		1,5
• 7. Were you worried because you took an active role in the treatment?		1,2

SUMMARY...

- More precise radiation therapy allows better control
- Less toxicity
- Good plans are essential
- IGRT is essential
- Set-up
- In room imaging
- Motion
- Gating
- SGRT provides more confidence in so many subtitles
