Automating Patient Data from OIS to SimRT

Erik Fura

Medical physicist

Västerås Central Hospital

Region Västmanland

The challenge

- Patient data could not be automatically imported

- I won't accept that

The challenge

Aria
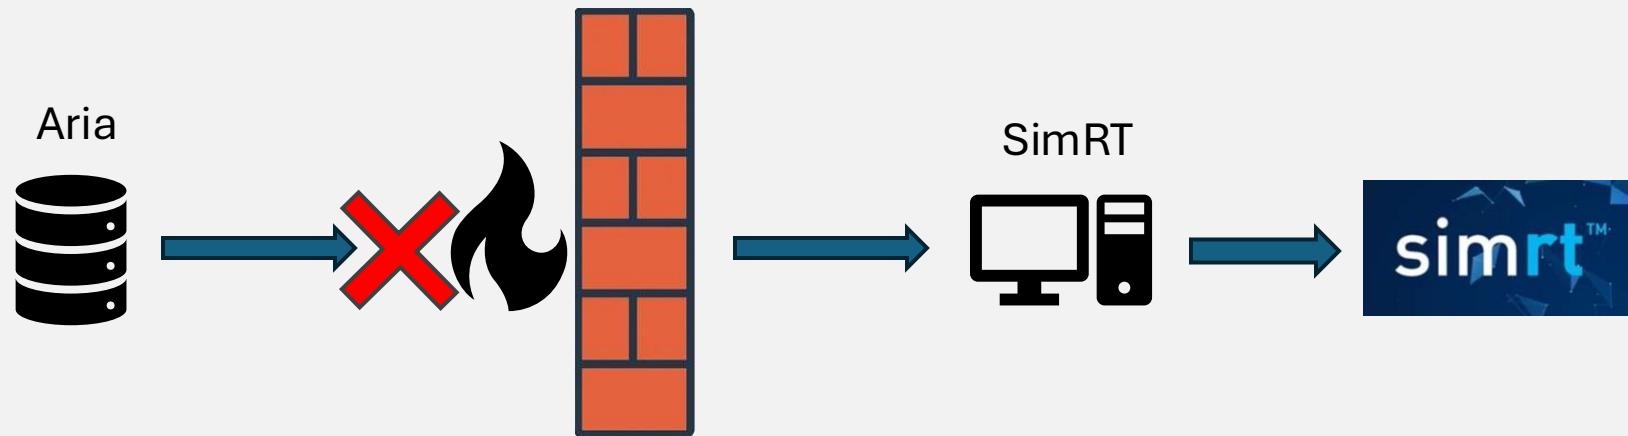

SimRT

Workflow

● ● ●

Download data

Get the patient data out from our OIS

Transfer data

Move the data from network of our OIS to SimRT workstation

Import data

Import the patient data into the SimRT software

Aria **1** ❌🔥🧱 **2** SimRT **3** simrt™
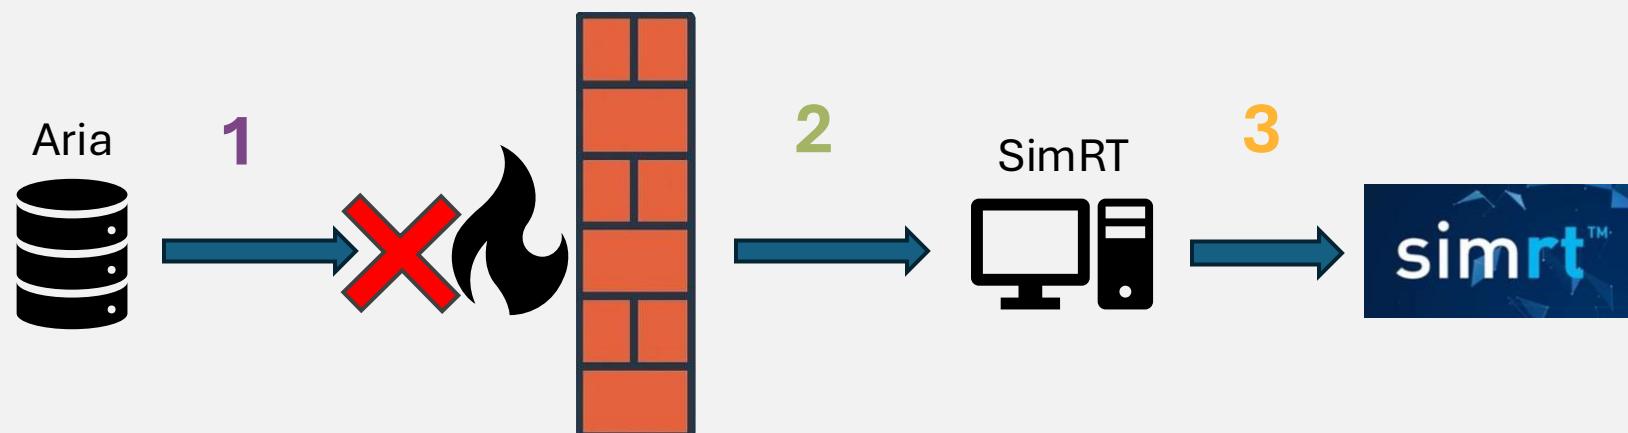

Download data

- How do we get the data from the OIS?
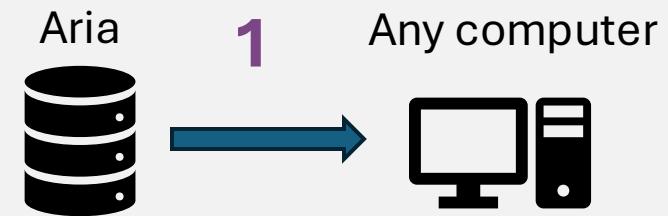

Aria **1** Any computer

- SQL queries
- Can be done on any computer connected to the OIS network

Download data

```
47  ⌄          public static DataTable GetScheduledSimPatientsOnCT(string startDate, string endDate)
48             {
49                 Connect();
50                 DataTable datatable = AriaInterface.Query(@"SELECT DISTINCT
51                                                     Patient.PatientId
52                                             FROM
53                                                     ScheduledActivity WITH (NOLOCK),
54                                                     Activity WITH (NOLOCK),
55                                                     ActivityInstance WITH (NOLOCK),
56                                                     Patient WITH (NOLOCK),
57                                                     ResourceActivity WITH (NOLOCK),
58                                                     Machine WITH (NOLOCK)
59                                             WHERE
60                                                     (Patient.PatientId LIKE '%19%' OR
61                                                     Patient.PatientId LIKE '%20%') AND
62                                                     ScheduledActivity.PatientSer = Patient.PatientSer AND
63                                                     ActivityInstance.ActivityInstanceSer = ScheduledActivity.ActivityInstanceSer AND
64                                                     ScheduledActivity.ScheduledStartTime BETWEEN '" + startDate + @"' AND '" + endDate + @"' AND
65                                                     ScheduledActivity.ScheduledActivitySer = ResourceActivity.ScheduledActivitySer AND
66                                                     ResourceActivity.ResourceSer = Machine.ResourceSer AND
67                                                     Machine.MachineId LIKE 'CT Canon' AND
68                                                     Activity.ActivitySer = ActivityInstance.ActivitySer AND
69                                                     (Activity.ActivityCode = 'DIB DT' OR
70                                                     Activity.ActivityCode = '4D DT')
71                                                     ");
```

How do we accomplish this?

2
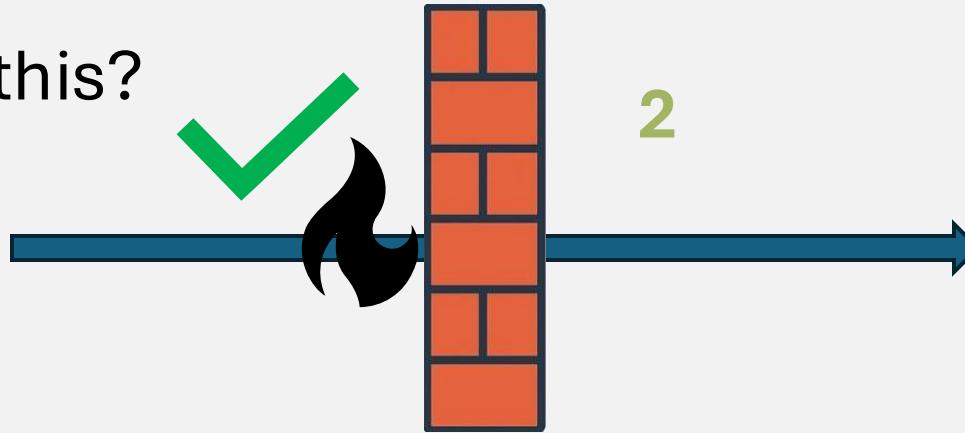

SimRT is not connected to the OIS network

Needed confirmation from both Varian and VisionRT

Importing data

- Quick and dirty solution
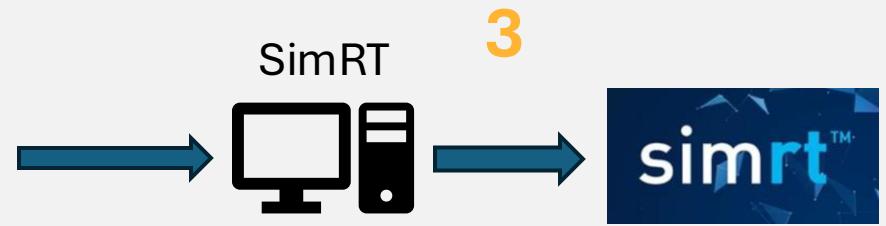

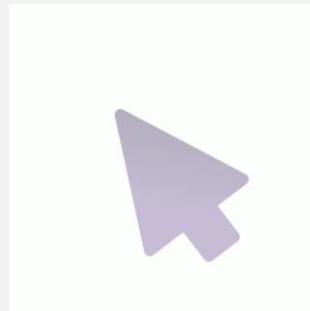

- Record positions and have the script click for you

- Should work with the standard monitor provided by VisionRT
