HEALTH

An oncologist was shocked to learn she had breast cancer. She had no symptoms and thought she was low-risk.

I'm A Breast Cancer Doctor. Here's What I Didn't Know — Until I Was Diagnosed Myself.

“Having counseled thousands of patients through their breast cancer diagnosis, I was fully aware of how nondiscriminatory this disease could be.”

How Her Own Breast Cancer Diagnosis Changed How This Breast Cancer Doctor Treats Patients: 'Now I'm in it'

“I’m a much better doctor because of everything I’ve gone through,” says Dr. Sue Hwang, 48

b Representative patient's RPM trace

The Real Cancer Journey

A winding road with four orange location pins marking different stages of the cancer journey. The road starts at the top left and curves downwards and to the right. The pins are placed at various points along the road, each corresponding to a stage of survivorship. Arrows point from the text labels to the pins.

Acute survivorship

Starts at diagnosis and ends when initial treatment is complete

End of Active Treatment

Starts the moment patients finish definitive treatment

Early Survivorship

1-3 years post definitive treatment

Long-term Survivorship

Remainder of the patient's life

Lessons Learned

01

As the number of survivors increase, so must our commitment to precision care

02

Quality of life needs to be valued just as much as quantity of life

03

Technology driven precision translates into lower toxicity for our patients

04

Workflow improvements are not abstract, they matter because they directly affect the patient

05

SGRT provides the patients with the certainty they need to replace anxiety with confidence

06

VisionRT provides the technical foundation to push the treatment envelope and redefine patient outcomes

Thank you
